BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

IMAGES ARE BEST AVAILABLE COPY.

As rescanning documents will not correct images, please do not report the images to the Image Problem Mailbox.

                                 The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 format directly from

           This sequence represents the glycyl trNA synthetase (glyS) beta subunit from Streptcocccus pneumoniae 0100993 (NCIMB 40794). The polynucleotide encoding glyS can be used for the requiring glyS activity. Sequences antisense to treat conditions requiring glyS activity. Sequences antisense to the polynucleotide can be used to control glyS expression. GlyS, or glyS expressing vectors can be used to induce an immune response, i.e. an antibody (Ab) and/or T cell response, against S. pneumoniae to protect against infection, or to screen for antagonists or agonists of the polynucleotide encoding glyS or glyS's activity, i.e. antibacterials. The antagonist, e.g. an anti-glyS Ab, can used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Note: The sequence data for this patent did not form the printed specification, but was obtained in electronic format directly from WIPO at
treat conditions requiring glyS inhibition,

A fragment of the polynucleotide encoding glyS can used as a probe to isolate full length or related sequences, or diagnose, e.g. by polymerase chain reaction, infection stage and type, including mutation and polymorphism detection. Diagnosis may also be achieved by detecting glyS gene overexpression, e.g. by immunoassay. The Ab can used to treat infection, isolate or identify glyS expressing clones, purify glyS and as an immunoassay reagent. More generally, the products can prevent adhesion of bacteria to wounds and in dwelling devices, block glyS protein mediated invasion of mammalian cells and block the normal progression of infection.

This is the amino acid sequence of the Streptomyces pneumoniae nove glycyl tRNA synthetase-beta (glyS-beta) protein. The polynucleotid are useful for producing the recombinant polypeptides, which can be used in vaccines or to screen for glyS-beta or glyS-alpha agonists antagonists with potential antibacterial activity. The

protein. The polynucleotides polypeptides, which can be

Claim 1; Columns 7-8;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Streptococcus; GAS; GBS; group B streptococcus; Streptococcus agalactiae; group A streptococcus; Streptococcus pyogenes; antibacterial; antiinflammatory; infection; vaccine; meningitis; gene therapy.
                               streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GAS (Streptococcus spaniactiae) or group A streptococcus/GAS (Streptococcus pyogenes), comprising one of 5483 sequences (S1), given in the specification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABN65044-ABN1526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to determine whether a compound binds to (I). A composition comprising (I) or a nucleic acid encoding (I), may be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New Streptococcus protein for the treatment or prevention of infection or disease caused by Streptococcus bacteria, such as meningitis, and for detecting a compound that binds to the protein -  \frac{1}{2} \int_{\mathbb{R}^n} \frac{1}{2}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Telford J,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Streptococcus proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Streptococcus; GAS; GBS; group B streptococcus; Streptococcus agalactiae; group A streptococcus; Streptococcus pyogenes; antibacterial; antiinflammatory; infection; vaccine; meningitis; gene therapy.
The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GAS (Streptococcus pyogenes), comprising one of 5483 sequences (S1), given in the specification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by
                                                                                                                                 New Streptococcus protein for the treatment or prevention of infection or disease caused by Streptococcus bacteria, such as meningitis, and for detecting a compound that binds to the protein \dot{}
                                                                                                                                                                                                                                                                                                                                                                                                                                                Streptococcus agalactiae
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Streptococcus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           02-JUL-2002

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to determine whether a compound binds to (I). A composition comprising (I) or a nucleic acid encoding (I), may be used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying
streptococcus/GBS (Streptococcus agalactiae) or group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GAS (Streptococcus agalactiae) or group A streptococcus/GAS (Streptococcus agalactiae) or group A streptococcus/GAS (Streptococcus/GAS (Streptococcus/GAS
                                                                                                                                                                                                                                                                                                                                                                                                                                               New Streptococcus protein for the treatment or prevention of infection or disease caused by Streptococcus bacteria, such as meningitis, and for detecting a compound that binds to the protein -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Streptococcus; GAS; GBS; group B streptococcus; Streptococcus agalactiae; group A streptococcus; Streptococcus pyogenes; antibacterial; antiinflammatory; infection; vaccine; meningitis; gene therapy.

Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to determine whether a compound binds t (I). A composition comprising (I) or a nucleic acid encoding (I), may used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying
                                                                                                                                                                               Novel human polypeptides and polynucleotides useful for diagnosing preventing and treating cardiovascular disease, neurodegenerative, hyperproliferative disorders and autoimmune disorders -

monocytogenes EGD-e (see ABA03041). The genome sequence and fragments it are useful for selecting probes and primers for detecting genes in monocytogenes and related organisms, and for studying genetic polymorphisms and other genomes. The present sequence is a protein encoded by the genome sequence of the present invention. Proteins

The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are

                        vertebrate slit proteins encoding nucleic acid sequences have at least 60% homology to nucleic acid sequences AAX89161-163. The vertebrate-derived proteins can be produced recombinantly by transforming host cells with expression vectors comprising the encoding nucleic acids. The proteins of the invention are for diagnosing and treating cancer of the nerves, muscle and/or endocrine system.
                                                                                                                  The invention relates to a vertebrate-derived protein containing an amino acid sequence shown in AAY27137 and AAY27139. The vertebrate-derived protein has at least 55 % homology to one of sequences shown in AAY27141-Y27143, and has slit protein-like activity. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     expressed from the genome sequence are useful for raising specific antibodies, identification of L. monocytogenes and related organisms, and for biosynthesis and biodegradation, especially biosynthesis of Vitamin B12. The genome sequence and proteins encoded by it are also useful for selecting compounds that regulate gene expression and cell replication

                                                                                                                                                                                                                                                                                                                                                                                                                                               Q
                                                                                                                                                                                                           Qγ
                                                                                                                                                                                                                                                                      Ър
                                                                                                                                                                                                                                                                                                                                                                                        ₽
                                                                                                                                                   В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is the human Slit-1 protein. The present invention also describes a method for identifying agents which modulate the interaction of Robo and a Robo ligand comprising: combining a Robo golypeptide, a Slit polypeptide and a candidate agent under conditions where the Robo and Slit polypeptides normally (but for the presence of the agent) engage in a first interaction, where the Slit polypeptide specifically binds, activated or inhibits the activation of the Robo golypeptides in the presence of the agent, where a difference between the first and second interaction of the Robo and Slit polypeptides; and a second interaction of the Robo and Slit polypeptides; and a method to modulate the interaction of Robo and Slit polypeptides; and a method to modulate the interaction of Robo and a Robo ligand. The method is useful for screening for Robo (roundabout) modulators and Robo:Slit complexes are useful for regulating various cell functions, especially of neuronal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                     The invention relates to a vertebrate-derived protein containing an amino acid sequence shown in AAY27137 and AAX27139. The vertebrate-derived protein has at least 55 % homology to one of sequences shown in AAY27141-Y27143, and has slit protein-like activity. The vertebrate slit proteins encoding nucleic acid sequences have at least 60% homology to nucleic acid sequences AAX89161-163. The vertebrate-derived proteins can be produced recombinantly by transforming host cells with expression vectors comprising the encoding nucleic acids. The proteins of the invention are for diagnosing and treating cancer of the proteins of the invention are for diagnosing and treating cancer of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              US-09-540-245A-2
                               Sequence 2, Application US/09103664A
Patent No. 6458358
GENERAL INFORMATION:
APPLICANT: University of Kentucky Research Foundation
APPLICANT: Timoney, John
APPLICANT: Artiushin, Sergey
APPLICANT: Artiushin, Sergey
TITLE OF INVENTION: Compounds Encoding the Protective M-Like Protein
TITLE OF INVENTION: and Assays Therefor
FILE REFERENCE: 50229-212
